

Specification Sheet

- Supra HF100 HDMI to DVI-D cable
- HDMI.ORG approved
- 720p and 1080i compatible
- Triple-screened OFC cable
- Metal HDMI & DVI connectors with 24k gold-plated contacts
- Sky HD and Telewest TVDrive compatible

Another fine example of Supra's commitment to producing high performance superior quality products that offer excellent value for money.

Award winning 1 metre Supra HDMI to DVI-D cable, great quality and high performance make this cable perfect for use with SKY HD, Telewest TV Drive or any other application requiring faithful picture reproduction.

The new "HF100" cable has been purposely designed to run at high resolutions such as 720p and 1080i even over 15 metres (for HDMI<->HDMI or HDMI<->DVI).

Indeed the new cables can carry DVI<->DVI signals over a 20 metre length without problem.

The HF100 cable design meets (and surpasses) HDMI Compliance Test Specification, revision v1.1 :

Triple-screened, OFC cable. 24k gold-plated contacts

Note that the Supra DVI connectors used are Jenving's own design and are re-wireable and made from die-cast aluminium, which give them good shielding properties.

4 screened twisted pairs of solid OFC conductors (with a PE foam insulation layer) improve the High Frequency response for wide-bandwidth and efficient signal transfer

Heavy Double layer shielding (1st layer: Aluminium foil, 2nd layer: Aluminium foil) shield signals from external influences and prevents the digital signal being radiated into nearby components or other cables

0.8 micron thick 24k gold-plated contacts on connectors deliver long term reliability

Small form factor cable - diameter only 9.5 mm, enabling cable to be easily hidden
