

Specification Sheet

- Supra X-ZAC Toslink to Toslink cable
- Metal body TosLink connectors
- Triple Polished Toslink connectors
- Totally immune from noise interference
- Toslink to Toslink
- 1m length

The new range of Supra fibre optic cables have been introduced to bring Supra quality to the field of digital audio transmission.

The Zero Attenuation Concept (ZAC) has been designed to minimise losses and make the cost-effective plastic optic fibre achieve the same transmission quality as that of glass fibre cores.

This is achieved by an innovative curving of the fibre core tip to ensure a zero divergence loss at the input and output of the cable.

X-ZAC - A higher quality triple polished precision metal body and metal connector provides exact fitting to all standard TosLink sockets, avoiding divergence losses caused by poorly fitting plastic connectors
